# Value of Crop Reports

- *A man's judgment is no better than his facts and crop reports are the basic facts of Agriculture.*
- *They aid farmers in planning their production and marketing.*
- *They are essential in enacting wise legislation affecting Agriculture.*
- *They are the basis for analysis of agricultural and other business conditions.*
- *They enable railroads to make a better distribution of cars for moving farm products.*
- *They give producers the same foresight to future price trends that organized dealers possess.*
- *They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.*
- *They are indispensable in times of war because food is as essential as ammunition and weapons of war.*
- *They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.*
- *They aid farm organizations, schools and others in planning constructive programs, and the prospective purchaser of land.*
- *They give information on surplus and deficit areas of production making possible a more economical distribution of products.*
- *They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no government reports.*
- *They are a guide to farm resources and for developing new resources as irrigation, electric power, location of food processing and other factories.*
- *They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased government crop reports reduce uncertainty which limits speculation.*
- *They indicate potential buying power thereby enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.*
- *They reduce the risk of ownership of buyers of farm products which enables them to do business on a smaller margin. Under the stimulus of competition, they pay producers higher prices than could be paid if uncertainty of production existed.*
- *They provide an accurate, unbiased picture of Pennsylvania's agriculture. The facts on present and prospective supplies furnish a sound basis for judgment and action by farmers, other individuals, business men, railroads, crop and livestock interests and government agencies.*

# Pennsylvania Agriculture

**A**GRICULTURE ranks as one of the great industries of Pennsylvania. In spite of surprising reductions in the number of farms and acres under cultivation during the past fifty years, production of crops, livestock, poultry, eggs and dairy products is at the highest level ever known.

According to the 1950 Census of Agriculture, Pennsylvania had 146,887 farms, averaging 96.1 acres in size. Total cropland was slightly less than 8,000,000 acres. In comparison with 1900, there were nearly 225,000 farms and slightly over 13,000,000 acres of cropland.

Capital invested in Pennsylvania farms is estimated at \$2,600,000,000. In 1952 the total farm cash income was nearly \$848,000,000, placing the State's Agriculture 14th in the nation.

Nearly one-third of Pennsylvania farm income is from dairy products while more than one-fourth comes from poultry and eggs. All livestock and poultry combined bring in more than 75 percent of the total farm income, a fact which stresses the importance of these industries within the State. Poultry numbers are the greatest ever known and cattle and calves on farms January 1, 1953 were at the highest peak in 58 years, totaling 1,897,000 head with a farm value of \$369,915,000. The State's great dairy industry, backed by 960,000 milk cows, produces nearly six billion pounds of milk per year on 40,000 dairy farms. Farm income from dairy products in 1952 reached an all-time record of \$279,000,000, fourth highest among all the States. Pennsylvania leads all other States in the production of ice-cream, nearly 70,000,000 gallons in 1952.

Farmers of the Keystone State ranked second in 1952 in total income from poultry. Pennsylvania was first in cash income from eggs: first in cash income from all chickens except broilers; first in value of chickens on farms Jan. 1, 1953; first in the volume of quality eggs State-graded for market. Pennsylvania in 1952 was second only to California in total cash income from all poultry and eggs; second among all states in number of chickens raised in 1952; second in number of chickens on farms Jan. 1, 1953; second in number of chick hatcheries, third in number of eggs produced; sixth in number and fourth in value of turkeys, Jan. 1, 1953.

In 1952 Pennsylvania ranked first among all States in the production of mushrooms, cigar leaf tobacco, spring and fall spinach, crops grown under glass, and nursery-grown Christmas trees; Keystone State farms in 1952 raised 37,000,000 chickens, produced nearly 3.7 billion eggs, more than 2,000,000 turkeys and 5.7 billion pounds of milk. Farmers fed more than 100,000 head of beef cattle; raised 1,100,000 hogs, and 141,000 sheep and lambs.

Citizens of the Commonwealth may well look with pride upon the accomplishments of Keystone State farmers, the productiveness and attractiveness of their many farms and orchards, and their contribution to the well-being of each and every resident.

## PENNSYLVANIA CROP SUMMARY—1952

**I**N SPITE of a wet Spring and a dry mid-summer, Pennsylvania farmers in 1952 had a bumper corn crop of 66,000,000 bushels valued at \$118,805,000. They harvested 47,000,000 bushels of wheat, oats, barley, rye and buckwheat; produced more than 36,000,000 pounds of tobacco; more than 7,000,000 bushels of apples, peaches, and pears, 17,200 tons of grapes, 10,500 tons of cherries, and thousands of tons of vegetables for fresh market, freezing and canning; the hay crop, although yields were reduced by drought conditions in many areas, amounted to 3,400,000 tons, valued at \$93,000,000.

The 1952 crop of Pennsylvania potatoes came from the smallest acreage in 87 years of records. In 1866, the first year of recorded data, the acreage was placed at 100,000, about one-third more than the 64,000 acres harvested in 1952. The peak acreage was reached in 1917 when 308,000 acres of potatoes were harvested, almost five times the 1952 acreage. The yield per acre 1917 was 96 bushels, but in 1952 the average was 225 bushels, the fifth year in succession when yields averaged over 200 bushels per acre. Dry weather during the growing season reduced yields in all areas. Production in 1952 amounted to 14,400,000 bushels, the smallest since 1898.

The aggregate value of Pennsylvania's principal field and fruit crops produced in 1952, estimated at \$344,757,000, was 2 percent above 1951.

## PENNSYLVANIA FARM LIVESTOCK INVENTORY, JANUARY 1, 1953

LIVESTOCK and poultry on Pennsylvania farms during 1952 showed a net increase of about  $\frac{1}{2}$  of 1 percent over 1951. The advance was attributed to the increased numbers of cattle and sheep as the number of all other species was down, except chickens, which held at about the same number as a year previous. Hog numbers as of January 1, 1953 recorded a 4 percent decline, while horses and mules showed a 13 percent drop. The combined total of all species on farms January 1, 1953 was 11 percent above the 10-year (1942-51) average.

With the slight increase in aggregate numbers of livestock and poultry, the farm value of \$448,000,000 was 6 percent below the \$475,000,000 on January 1, 1952, but 48 percent above the 10-year average. January 1 inventory value of all species was lower than a year previous. Most pronounced of all were the declines of 24 percent from a year earlier in the average value per head for sheep, 19 percent in the average value of hogs, and 10 percent for cattle and calves.

**CATTLE:** Cattle and calves on Pennsylvania farms January 1, 1953, estimated at 1,897,000, established a record over the past 58 years. This was 6 percent or 107,000 head above a year earlier and 14 percent above the 10-year average. The total inventory value of all cattle and calves was about \$370,000,000—5 percent less than January 1, 1952, but 67 percent above average. Cattle were valued at 83 percent of the value of all 7 species of livestock compared with 82 percent in 1951 and the 10-year average of 73 percent.

**HOGS:** Hogs on farms January 1 were estimated at 676,000—4 percent less than a year previous and 12 percent below average. With the decline in numbers and a 19 percent drop in the value per head the inventory value of hogs amounted to approximately \$17,000,000—22 percent less than in 1951 and 10 percent below average. For 1953, Pennsylvania farmers intended to decrease the spring farrowing by 16 percent from the spring of 1952.

**SHEEP:** Stock sheep numbers on Pennsylvania farms January 1, 1953 totaled 254,000 head, 8 percent above a year previous but 9 percent below average. Ewes 1 year old and over at 164,000 were 10 percent above the same date a year ago. The sharp drop in the value per head resulted in an 18 percent decline in the total value of sheep since January 1, 1952.

**WORKSTOCK:** Horse numbers which have been showing a steady decline since 1932 were placed at 76,000—down 13 percent from a year earlier and 57 percent below the 10-year average. The January 1953 inventory value of horses at \$5,320,000 was 15 percent below a year previous and 68 percent below average. Mule numbers reached an all-time record low at 9,000 head—a 10 percent decline from 1952 and 64 percent below average. These animals at a value of \$89.00 per head as compared with \$86.00 a year ago earlier, were the only specie showing an increase over January 1, 1952.

**CHICKENS:** Chickens on Pennsylvania farms January 1, 1953, excluding commercial broilers, totaled 26,911,000—a slight increase over the 26,853,000 estimated on hand a year earlier, and 12 percent above the 10-year average. The value per chicken on hand January 1, 1953 was \$1.80 compared with \$1.85 a year earlier and the average of \$1.58. The total value of all chickens on farms was \$48,440,000—a decrease of 2 percent from January 1, 1952 but 27 percent above average.

**TURKEYS:** Farm holdings of turkeys (excluding turkey fryers) on January 1, 1953 numbered 224,000—3 percent below a year previous but 26 percent above average. On January 1 there were 10 percent fewer breeder hens than a year earlier. Pennsylvania farmers expressed an intention to raise 10 percent fewer turkeys in 1953 than in 1952.

---

This issue of the Pennsylvania Annual Crop and Livestock Report for 1952 continues the series of annual publications which contain pertinent data by counties and for the State. Included for selected important commodities are data designed to show areas of production, quantities produced, value of production, prices and other related subject matter.

The Pennsylvania Department of Agriculture and the Pennsylvania Federal-State Crop Reporting Service express appreciation to the thousands of voluntary crop and livestock reporters throughout the State, business firms, processors, and other handlers of Agriculture products for supplying the basic information required for the preparation of this publication.

TABLE 1 - RANK OF PENNSYLVANIA CROP PRODUCTION, 1952 1/

## PRINCIPAL CROPS IN PENNSYLVANIA, RANKED BY VALUE, 1952

Crop	Rank	Value
Corn	1	\$118,805,000
All hay	2	92,895,000
Potatoes	3	39,600,000
All wheat	4	38,024,000
Comm'l truck crops	5	23,455,000
Oats	6	20,362,000
Tobacco	7	9,807,000
Comm'l apples	8	8,354,000
Barley	9	6,845,000
Peaches	10	4,560,000

## RANK OF PENNSYLVANIA AMONG STATES, IN CROP ACREAGE, YIELD, PRODUCTION AND VALUE, 1952

Crop	States producing	Acreage		Yield		Production		Value	
		Rank	Acree	Rank	Bu.	Rank	Bushele	Rank	Dollars
Corn	48	18	1,347,000	9	49.0	11	66,003,000	11	118,805,000
Winter wheat	39	15	845,000	10	22.5	15	19,012,000	15	38,024,000
All wheat	40	18	845,000	11	22.5	17	19,012,000	16	38,024,000
